FRENCH NATCAT INSURANCE SCHEME

PUBLIC – PRIVET PARTNERSHIP

Solidarity

An insurance guarantee not a public fund
Premiums and deductibles are set up by the Government

A compensation scheme fixed by law

State recognition of a natural disaster

An interministerial NatCat decree triggers the right to compensation.

Shared responsibility through compulsory deductibles

Absence of Risk Prevention Plans (PPR) set up by the State

=> Threat of adjustable deductible

Non respect of PPR's requirements, 5 years after approval

=> Threat of increased deductibles *via* the BCT*

Unlimited State guarantee

State acts as a reinsurer of last resort of NatCat regime /

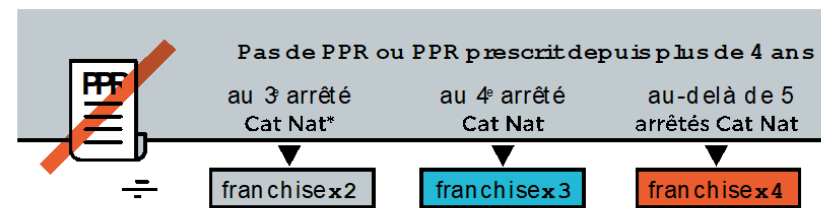

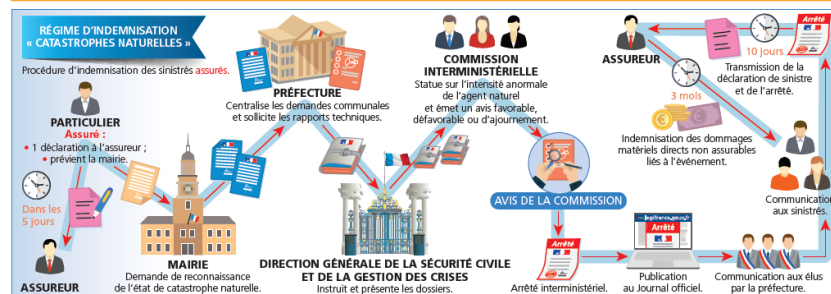

Reinsurance program, operated by CCR

Reinsurance agreement whose only shareholder is the State is proposed by CCR* to direct insurance companies

Compensation procedure

Source : DGSCGC - Ministère de l'intérieur

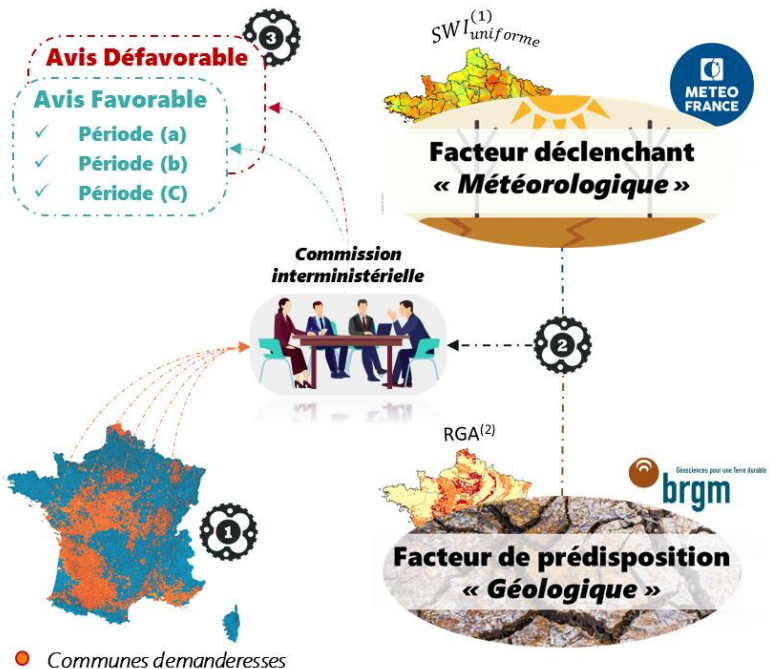

*en moins de 5 ans pour le même aléa

BCT : Bureau Central de Tarification / Central Bureau of fee charges CCR : The Caisse Centrale de Réassurance

FRENCH NATCAT INSURANCE SCHEME GEOTECHNICAL DROUGHT CASE STUDY

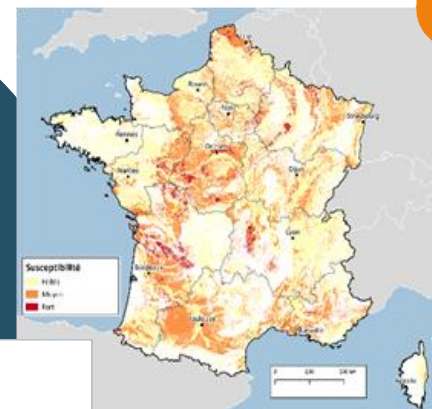

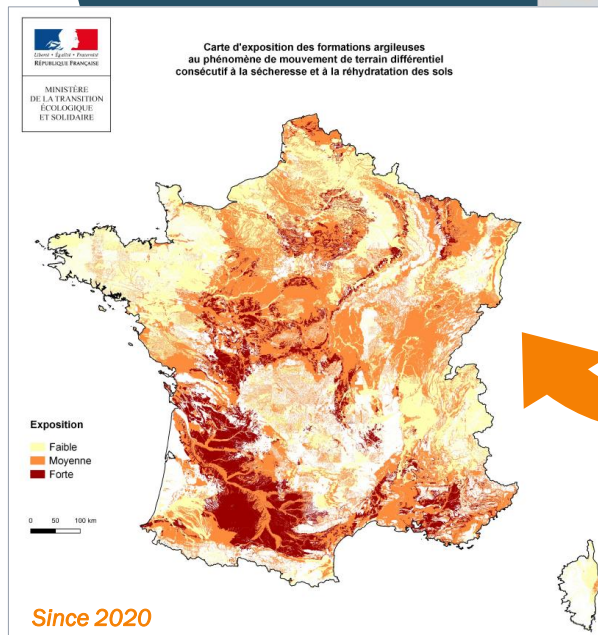

Péril « Sécheresse Géotechnique »

(1) $SWI_{uniforme}$: Soil Wetness Index, (Météo-France) in it's « uniforme » version.

MRN's contribution in updating the susceptibility map

Since 2010 to the end of 2019

MRN GIS' TOOL

Extranet platform of geo-services : risk prevention trough an analyze of the exposure of specific assets.

LE SIG MRN, OUTIL PHARE POUR LA PROFESSION

L'application géographique en ligne dédiée à l'analyse du risque

CAT CLIM DATA

Catching & analyzing technical damage data at micro level

Équipement de Génie Climatique

Coût moyen : 2 900 €

Contribution à la charge totale : < 1%

Charpente – Couverture

Coût moyen : 11 200 €

Contribution à la charge totale : < 1%

Embellissement – Finition

Coût moyen : 6 300 €

Contribution à la charge totale : 13%

Structure

Coût moyen : 8 000 €

Contribution à la charge totale : 1%

Façade - Véranda - Revêtement Extérieur

Coût moyen : 8 800 €

Contribution à la charge totale : 32%

Fondations - Ouvrage enterré - Sous-œuvre

Coût moyen : 24 800 €

Contribution à la charge totale : 52%

Réseaux intérieurs - Autres Équipements

Coût moyen : 2 300 €

Contribution à la charge totale : < 1%

Menuiserie

Coût moyen : 2 600 €

Contribution à la charge totale : < 1%

Viabilité - Réseau Extérieur - Jardin - Piscine

Coût moyen : 5 100 €

Contribution à la charge totale : 1%

Etude de sol (liée au sinistre)

Coût moyen : 3 000 €

Contribution à la charge totale : 1%

DATABASE ON INSURED LOSSES BY EVENT (BD SILECC)

Compensated losses aggregated by municipalities and event.

Catching & analyzing technical damage data at micro level of affected buildings

The application of DataScience to catching & analyzing technical damage data at micro level of buildings and their components due to natural hazards in France

Main objectifs :

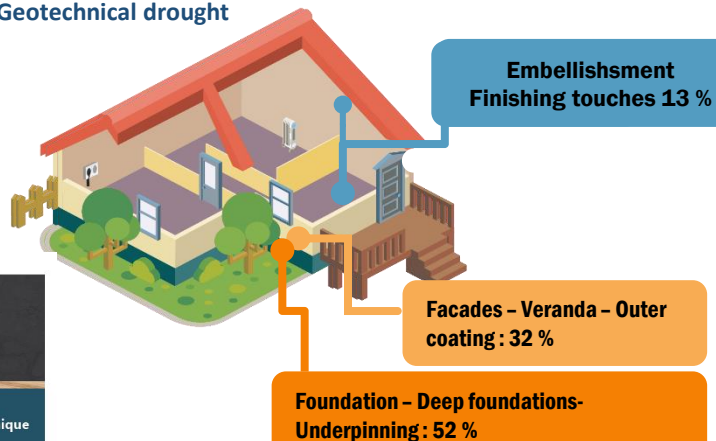

- ▶ Collecting and harmonizing available technical data of insured damage & losses at micro level of affected buildings (to be used in modelling and « build back better ») in order to :
 - Better assess the impact of events
 - Better assess the vulnerability of assets
- ▶ Identify further développements and action levers in order to reduce the NatCat losses.
